

GYNECOLOGIC PROGRAM OVERVIEW

Our gynecologic oncology program is recognized as one of the world's finest

and is ranked #2 in the 2017 U.S. News & World Report.

We provide patients with:

- the latest minimally invasive, image-guided techniques for diagnosis and treatment of cervical, uterine, and ovarian cancers, and gestational trophoblastic disease
- access to innovative clinical trials of chemotherapy, surgical techniques, and advanced technologies not available at other hospitals
- an individualized treatment plan

LOCATIONS

Many of our specialists are centrally located at our **Manhattan location**. We also have regional outpatient locations in:

- MSK Basking Ridge, New Jersey
- MSK Monmouth, New Jersey
- MSK Commack, Long Island
- MSK Rockville Centre, Long Island
- MSK Westchester, West Harrison

Leadership

- Our team developed the **sentinel lymph node mapping** algorithm for endometrial and cervical cancer that is now a standard of care in the National Comprehensive Cancer Network guidelines.
- Our researchers are investigating **emerging immunotherapy approaches** — immune checkpoint inhibitors and chimeric antigen receptor (CAR) T cell therapy — for solid tumors.
- We are studying the use of **secondary cytoreduction** with and without hyperthermic intraperitoneal chemotherapy (HIPEC) followed by systemic chemotherapy for women with recurrent ovarian, fallopian tube, or primary peritoneal cancer.
- We routinely utilize MSK-IMPACT™ (Integrated Mutation Profiling of Actionable Cancer Targets) to **test for mutations in both rare and common cancers**. This provides our oncologists with unparalleled assessment of the tumor molecular profile.

Advanced Technologies

- We use the latest laparoscopic and robotic surgical techniques resulting in **greater precision, fewer complications, decreased postoperative pain, shorter hospital stays, and faster recovery** compared with open surgery.
- We pioneered several approaches using **infrared technology advances in visualizing lymphatics** during uterine and cervical cancer surgery and continue to investigate the role of [18F]-fluorodeoxyglucose (FDG) lymphography and nanoprobe in gynecologic cancer surgery.
- Our **24/7 pathology lab** processes digitized images of tissue samples very quickly, including during surgery, to help patients avoid unnecessary procedures.

Expertise

- We perform **more than 450 operations per year for new endometrial cancer**.
- We are the first hospital in the United States to create a **dedicated advanced ovarian cancer team**.
- We offer the **largest fertility-preserving surgery program in the United States** using the radical trachelectomy procedure—an alternative to radical hysterectomy—in eligible cervical cancer patients.
- The majority of younger women who undergo trachelectomy can **conceive naturally and deliver full-term babies**.
- We have one of the **largest uterine sarcoma programs in the world**, with extensive expertise in surgery and chemotherapy for complex advanced and recurrent disease.

By the Numbers
